

GOT FISH?

Hybrid Elastomeric Raceway Coatings

Makah Hoko Hatchery (below)

Innovative Coating Solutions has worked for the past 11 years on the development of dedicated coatings and application systems for the sole purpose of hatchery raceway linings. At the **Methow Basin** site, high fish kill rates were their major concern. With the application of our lining system, kill rate dropped by over 90%. At the **Trask** Hatchery we worked with Oregon Department of Fish and Wildlife engineers to develop the mottled application similar to the one at the top of this brochure. ICS recently completed raceway coatings at **McKenzie** and **South Santiam** Hatcheries. One other benefit is drastically reduced maintenance time required with our poly-urethanes, algae doesn't stick to our lining like it does to the walls of your raceways. Raceway walls that are easier to brush off means less maintenance time. The integrity of your raceways is also protected against the effects of pressure washing.

Looking for value returned for your dollars spent? 16 years experience in Hatchery Coatings, NSF and water potable certified, Not harmful to fish or the environment, reduces maintenance time and expense. lowers fish mortality rates, specifically formulated for hatchery applications, eliminates concrete degradation, increases hatchery productivity . Call ICS today!!
