Why the picture of the clarifier at Smurfit Newsprint in Oregon City? To demonstrate that our coatings are chemically resistant as well as certified water potable and safe for your fish!! Our coatings have been holding up to the nastiest environments for over 15 years. That means once you have lined your ponds with our elastomeric polyurethane formulation, you are done!! Seal and smooth your rough concrete walls and drastically reduce fish disease and mortality rates! Maintenance crews love the way our coated walls clean up. Much less brushing, algae doesn't stick to our liner like it does to concrete. There are no VOC's in our coatings, and that means we are good to the whole environment! Check out our protective liners for your raceways. Our coatings are in test at Bonneville and have been specked for 46 raceways at Carson NFH!! You can find other systems out there, but none equal our liner systems!!
