
ICS, Inc.

Our chemically resistant liners
will restore your water truck
tanks and sweeper debris bodies
protecting them against further
corrosion and help them empty
more cleanly .

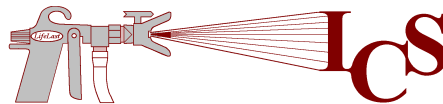

Isn't your expensive equipment
worth the protection?

Your equipment will last longer
and be more efficient with our
liners.

Coated tank is protected from further corrosion

Tank will empty cleaner with less sticking

Our sprayed in tank liners
will protect your equipment
from the inside out so you
can take care of the rest.

*Innovative Coating Solutions,
Inc.*

*Protective coating solutions
for your valuable equipment.*

**"We make your equipment
work better and last longer."**

Have you noticed the corrosion and pitting inside your equipment?

Top of tank riddled with corrosion from normal use. Lower half of tank after ICS preps steel for coating. This process usually reveals any structural problems that need to be repaired before coating.

Innovative Coating Solutions has been caring for your competitors equipment for 6 years now, saving them money and helping them make their capital expenditures for equipment last longer and generate more profit. We are ready to go to work for you too! Mild steel tanks and debris bodies will look like Swiss Cheese from the effects of corrosion and daily use. Loads will begin to stick and become hard to empty thereby compounding your problems.

Why not let us fix it once and for all? Our tank lining will protect your equipment from corrosion, electrolysis, and load sticking, which will save you time and money.

Look at the surface of this debris body and the discovered damage to the surface of the steel.

Coated and protected. No more corrosion. Chemically resistant. Less or no load sticking.
